

## 2019 Tree and Shrub Care Program

Your program will consist of 5 seasonal applications that will protect and enhance the look of your landscape. We concentrate on ornamental trees and shrubs installed on your property. The program is designed to provide season long fertilizer to encourage growth and provide protection from insects, fungus and disease.

**Dormant Oil** – Foliar spray to all branches and trunks to thorough, uniform coverage. The treatment is a mineral oil that will smother eggs and insects in their ‘dormant’ state.

**Insect and disease #1** – Foliar spray solution of a general insecticide and fungicide to cover a wide array of potential pests.

**Insect and disease #2** – Second foliar spray. We use another general solution of the same insecticide along with a different\* fungicide to ensure proper prevention.

\*fungus will become resilient to a singular fungicide so we vary products with each spray.

**Deep Root Injection** – 20-20-20-soluble fertilizer. Spring treatment delivered as a single injection for smaller shrubs, or via grid method beneath the canopy for larger trees.

**Winter Protection** – Transfilm – an effective anti-dessicant spray to help protect non-deciduous plants from winter burn.

*Great Care offers lawn care programs, tree and shrub programs, tick and mosquito applications, aerations, thatchings and seeding. We will also provide specialized treatments that may be specific to your lawn, including, but not limited to fungicides and insect controls*
